Catalog Course Description
Enrollment in BIOL F400 signals that a student has initiated a capstone research project. The capstone project may be completed within a designated course or by working individually with a faculty mentor; see the biological sciences program description for more information.

Prerequisites
Junior or senior standing
Note that students should have a plan in place to initiate a research project before registering for this course.

This is Not a Normal Course!
The capstone experience for students in the Biological Sciences major is to complete a mentored research project. The project is carried out in a designated course or by working individually with a faculty mentor. The BIOL F400 “course” does not add to the project work involved; rather it is an administrative tool to keep track of students working on their capstone research in many different ways. BIOL F400 confers no credit and has no regular course meetings. However, you will receive occasional communications from the instructor and you are expected to keep the instructor informed about your progress.

Once you have completed the research project requirements and the faculty mentor confirms this is the case, the BIOL 400 instructor will report a passing grade on BIOL F400 to the registrar.

Goals and Learning Objectives
The broad goal of the capstone project is to integrate knowledge and skills learned in previous courses, including scientific knowledge, quantitative literacy, and communication skills, and to apply these products of the university education to a creative activity. For a biologist, a fundamental expression of applied knowledge, creativity, and critical reasoning is to engage in scientific inquiry.

The learning objectives of the capstone project are as follows:
- Learn through experience to pose and test biological hypotheses.
- Employ critical thinking by evaluating the scientific literature in the subject area.
- Reinforce and enhance quantitative knowledge by analyzing and interpreting data.
- Reinforce and enhance writing and oral presentation skills by communicating science.
Requirements of a Capstone Project

The capstone project in Biological Sciences consists of a mentored research project on a biological topic that is completed in the junior or senior year. The requirements are:

- The capstone project must be chosen by the student in consultation with a faculty mentor.
- The faculty mentor must approve the project before work begins.
- The project must include the evaluation of data. In most cases the student will collect an original data set, but working with an existing data set is also acceptable.
- The rationale, approach, and conclusions must be communicated in three ways.
  - A formal written report in the style of a scientific paper
  - A short, non-technical summary of the project goals and outcomes, written for the public
  - An oral presentation of the study goals and outcomes

All capstone projects are assessed using a common set of expectations (see Final Evaluation of Capstone Project).

Students pursuing a BA in Biological Sciences are encouraged to incorporate aspects of social science or humanities into their capstone project.

How to Find a Capstone Research Project

Students may pursue a capstone project in one of two ways.

1. Take a designated capstone course

   A student may perform a project within a designated capstone course in Biological Sciences or Wildlife Biology and Conservation. Capstone courses are offered across a range of sub-disciplines within biology. A list of capstone courses in Biological Sciences may be found in the UAF catalog (see the program description). All capstone courses include the expectation that the student will complete a biological research project. Typically, the capstone course instructor will introduce one or several model study systems and methodologies that will form the basis for the student’s project. The course instructor will assist the student to design a study and analyze the results. The capstone requirement within a course will be fulfilled only when all criteria of the capstone project are evaluated as adequate or better on the Final Evaluation of Capstone Projects rubric. It is expected that the capstone project will constitute only a portion of the course grade. **Thus, it is possible for a student to pass a capstone course without receiving credit for the capstone project, or to receive credit for the capstone project without passing the course.** When the student has successfully completed the project, instructors will provide the Biology and Wildlife Department with a signed evaluation form and copies of the written assignments (the formal paper and the non-technical summary) to be archived by the department.

2. Work individually with a faculty mentor

   A student may satisfy the capstone requirement by conducting a research project individually with a faculty mentor, typically a member of the UAF Biology & Wildlife faculty. A **student wishing to work individually with a mentor must submit a Capstone Research Mentoring Agreement form to the BIOL 400 instructor (diane.wagner@alaska.edu) or the biology office manager (pthomas10@alaska.edu, 101 Murie) by 5 Sep at 5pm (the day before the Add/Drop deadline)** or risk being dropped from BIOL 400. The form is available on the BIOL 400 Blackboard site (https://classes.alaska.edu/) and the Biology & Wildlife website (https://www.bw.uaf.edu, choose undergraduates/capstone/forms).
If the research mentor is not a member of the Biology & Wildlife faculty, then an additional faculty evaluation completed by a faculty member in the Biology and Wildlife Department will be necessary. If an additional faculty evaluator is necessary, the student should work with the mentor to identify an appropriate evaluator, and the evaluator should agree to serve in that capacity, early in the process and before work begins.

WHEN THE PROJECT IS COMPLETE AND HAS BEEN SATISFACTORILY EVALUATED, THE STUDENT SHOULD SEND THE FOLLOWING ELECTRONICALLY TO THE BIOLOGY AND WILDLIFE DEPARTMENT (uaf-bw-dept@alaska.edu):

- Written report (clean version in its final form)
- Non-technical summary (clean version in its final form)
- Final Evaluation of the Capstone Project form, signed by the research mentor
- If relevant (see paragraph above): an additional Final Evaluation of the Capstone Project form, signed by a Biology & Wildlife Department faculty evaluator

A student may receive course credit for the mentored research project by enrolling in individual study (e.g. BIOL F497), and these credits may be applied to the student's degree requirements; however, course credits are not necessary for completion of the capstone project.

What If I Do Not Complete the Project Within a Semester?

A capstone research project might extend across several semesters, or an initial project may be abandoned in favor of a new one. In these cases, there is no need to register for BIOL F400 repeatedly. If the capstone project is not completed, or not completed satisfactorily, within a semester, the BIOL F400 grade will be deferred (DF) grade until a later semester. The DF will be changed to P when the student passes the capstone project. A DF grade will convert to a W after two years. The BIOL F400 instructor can prevent this conversion if the student demonstrates she or he is actively working to complete a project.

The Capstone Research Assignments in More Detail

Written report

All capstone projects must include a written assignment. This is typically a final report expressing the study goals, methods, findings, and conclusions written as a scientific paper, but may in special cases be a research proposal. The report should meet the following guidelines:

- Final research reports should include the following sections: abstract (written for scientists and not the same as the non-technical summary below), introduction, methods, results, discussion, conclusion, and references. (Section requirements for proposals may vary.)
- Figures and tables should be effective and legible. They may be embedded where they are needed by the reader or placed at the end of the document. All figures and tables require an explanatory legend.
- References may be formatted as the author chooses (i.e. the format of a journal in the field) but formatting should be consistent throughout. All cited references must be included in the reference list, and all listed references should be cited within the text.
- Reports should be at least 8 double-spaced pages (excluding figures and references) and cite at least 10 relevant references.

Non-Technical Summary

Communicating scientific results to the public is an important aspect of research. In addition to the formal written report, capstone research findings must be communicated in the form of a short,
non-technical summary. The summary should consist of one or two paragraphs (no more than one page) encapsulating the goal, approach, and findings of the study in language that could be understood by a non-scientist.

**Oral presentation**
The findings of all capstone projects must also be communicated orally. Oral presentations may be delivered in class, at a scientific conference, at UAF Research Day, or in another instructor-approved setting. Digitally-illustrated oral presentations and poster presentations are the most common forms of oral presentation.

**Assessment of the Capstone Project**
The expectations and assessment of the capstone project are the same regardless of whether the capstone is completed within a designated course or by working individually with a faculty mentor. All capstone projects are assessed using a standard evaluation rubric, which is reproduced at the end of this syllabus. A student must score “adequate” or above on all aspects of the evaluation in order to earn a passing grade on the capstone project.

There are four possible grades for the BIOL F400 course, explained in the table below.

<table>
<thead>
<tr>
<th>Grade</th>
<th>Interpretation</th>
</tr>
</thead>
<tbody>
<tr>
<td>P</td>
<td>Pass - Indicates that the student earned a score of “adequate” or above on all points detailed on the capstone project evaluation rubric</td>
</tr>
<tr>
<td>DF</td>
<td>Deferred – Indicates that the student did not complete or pass a capstone project in the current semester. For example, the DF grade would be given if the project spanned more than one semester, or if the student did not receive “adequate” or above scores on the capstone evaluation form. When the student does pass a capstone project, the DF grade will be changed to a P.</td>
</tr>
<tr>
<td>W</td>
<td>Withdrew - A DF grade cannot remain on the transcript indefinitely. If after 2 year the BIOL F400 instructor does not extend the DF grade, it will convert to a W on the transcript.</td>
</tr>
<tr>
<td>F</td>
<td>Fail – Ordinarily, a student would not fail a capstone project, but rather would continue to revise the project until it received a passing grade. However, a student might receive an F as the consequence of a serious violation of the code of conduct.</td>
</tr>
</tbody>
</table>

**Course Policies**
All students are expected to be familiar with the UAF Student Code of Conduct (available online and in the UAF Catalog) and to follow it at all times. Academic dishonesty will not be tolerated. Acts of academic dishonesty will result in at least a failing grade for the current capstone project but may also result in more severe consequences, including expulsion from the University. Violations of the Code of Conduct will be reported to the UAF Dean of Students. Acts of academic dishonesty include, but are not limited to, the following.

- Plagiarism (see below)
- Cheating
- Fabricating data
- Obtaining an extension on an assignment or permission to miss a class through false pretenses
• Turning in an assignment that was prepared for a different class, unless you have received permission to do so
• Falsifying grade record

Plagiarism is the use of someone else's ideas, text, or graphics without acknowledging the source. Plagiarism is a serious form of academic dishonesty. Examples include the following.
• Copying text verbatim from a print source, including websites, books, reports, or articles, whether published or unpublished, without quotation marks and attribution
• Changing a few words within a copied block of text to obscure its resemblance to the original
• Presenting a graph or table created by someone else in a written document without attribution
• Presenting someone else's data without attribution
• Presenting someone else's ideas as your own without attribution

Student Protections and Services Statement
Every qualified student is welcome in my classroom. As needed, I am happy to work with you, disability services, veterans’ services, rural student services, etc. to find reasonable accommodations. Students at this university are protected against sexual harassment and discrimination (Title IX), and minors have additional protections. As required, if I notice or am informed of certain types of misconduct, then I am required to report it to the appropriate authorities. For more information on your rights as a student and the resources available to you to resolve problems, please go the following site: www.uaf.edu/handbook/.

Support Services
Computer software - The UAF Office of Information Technology provides access to computer programs that may be useful for analyzing and graphing data (JMP for statistics, Microsoft Excel for simple statistics and graphing).

Disabilities - The Office of Disability Services implements the Americans with Disabilities Act (ADA) and ensures that UAF students have equal access to the campus and course materials. The instructor will work with the Office of Disability Services (208 Whitaker, 474-5655) to provide reasonable accommodation to students with disabilities.

Writing - UAF English's Department's Writing Center (907-474-5314, Gruening 8th floor)

Oral presentation - UAF Department of Communication’s Speaking Center (907-474-5470, speak@uaf.edu)

Important Deadlines (for students working individually with a mentor)
These deadlines do not apply to students working in designated capstone courses. Extensions may be requested and will be evaluated on a case by case basis.

22 Jan 2020, 5pm – deadline to submit completed Mentoring Agreement to the course coordinator. This is not a requirement if you are taking a designated capstone course (e.g. BIOL 440). It is a requirement if you are doing research with an individual mentor.

24 April, 5pm – deadline to submit final written work and evaluation form(s) to uaf-bw-dept@alaska.edu or diane.wagner@alaska.edu).
## Final Evaluation of Biological Sciences Capstone Project

### I. Written report
